17 October

UNIVERSITY OF
OXFORD

WHY IS
THERE A
HANDPUMP
IN THE
CAR PARK?

Smart Water Systems group

Science-practitioner partnerships which work for the poor

- Novel technology
- Computational informatics
- Institutional design
- Sustainable finance
- Policy reform

The \$1bn challenge

Maintaining Africa's rural water infrastructure

Access to improved water sources in rural sub-Saharan Africa¹

1. Data drawn from WHO/UNICEF Joint Monitoring Programme (2015).

2. Estimate from Macarthur (2014). This corresponds with number of users of boreholes & protected wells, as calculated from JMP country files.

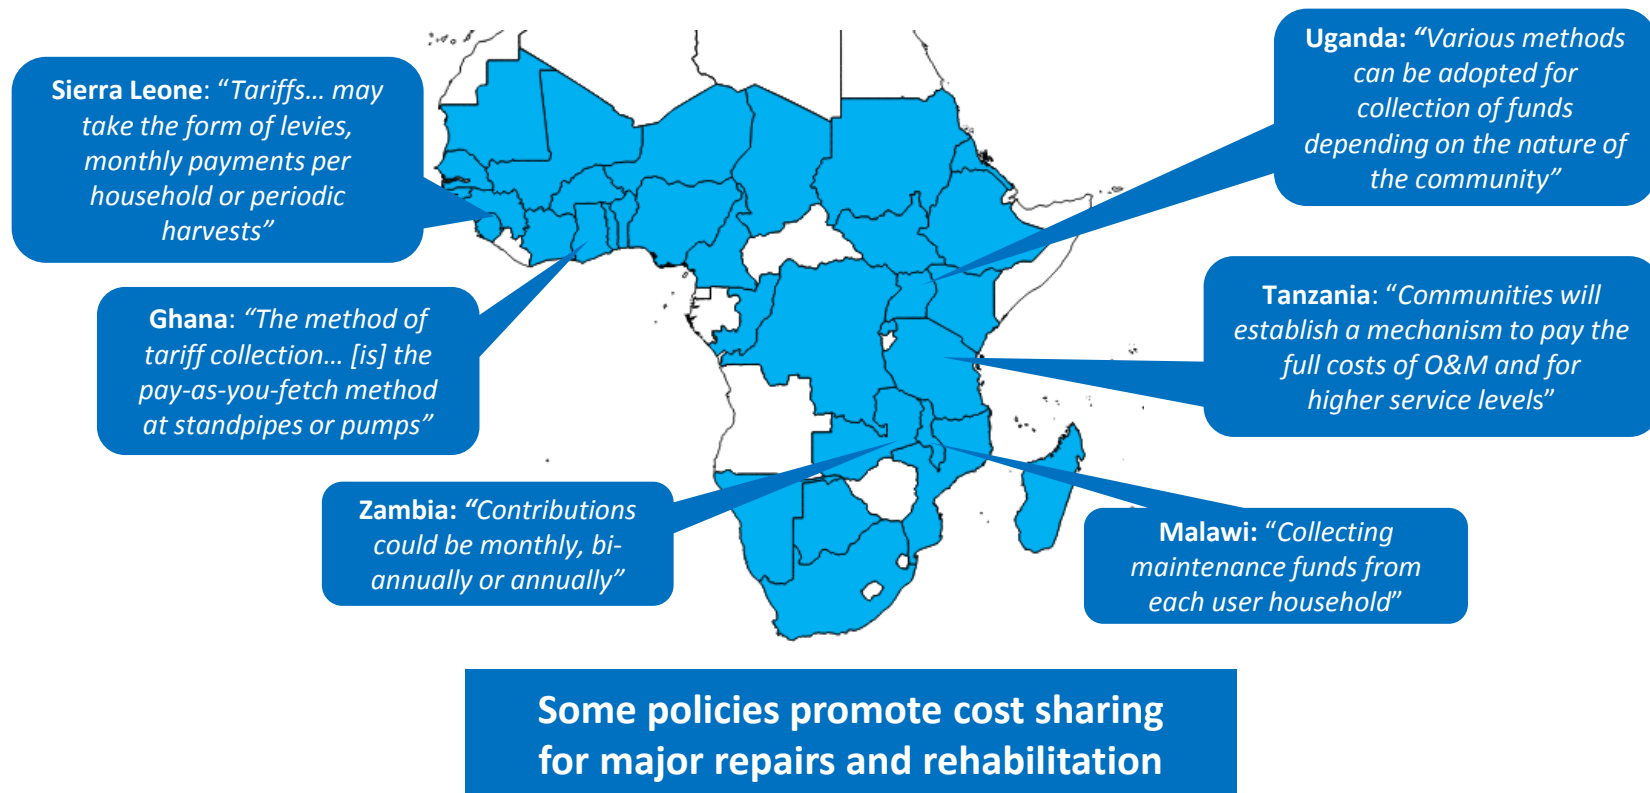

3. Based on mid-points of annual O&M cost requirement of US \$2-3 per person (WASHCost 2011, adjusted to 2014 values).

4. Calculated from JMP country files.

5. Based on mid-points of annual O&M cost requirement of US \$2-12 per person (WASHCost 2011, adjusted to 2014 values).

Community-based financing of O&M promoted in policy and practice

 = country with rural water cost recovery policy or financing plan assuming O&M costs covered by household contributions

1. Based on information presented in Banerjee & Morella (2011) and GLAAS (2014). Banerjee & Morella (2011) listed countries with a rural water cost recovery strategy. GLAAS (2014) listed countries with a “financing plan [which] defines if operating and basic maintenance is to be covered by tariffs or household contributions”. Quotes taken from the following sources: Malawi Ministry of Irrigation and Water Development (2010), Tanzania Ministry of Water and Livestock Development (2002), Zambia Ministry of Local Government and Housing (2007), Uganda Ministry of Water and Environment (2011), Sierra Leone Ministry of Water Resources (2013), Ghana Community Water & Sanitation Agency (2011),

Mismatch between policy and reality

Majority of waterpoints lack revenue collection

Rural households paying for water (2008-09)¹

Revenue collection rates²

1. n=17,515 (Afrobarometer, 2014). Available at: <http://afrobarometer.org/data>.

2. Piped scheme data obtained from Uganda Ministry of Water and Environment (2014), WASREB (2014), EWURA (2014). Analysis excludes waterpoints located in urban areas. Analysis based on publicly available waterpoint datasets (Virtual Kenya, 2015; National Water Sanitation and Hygiene Promotion Committee, 2014; Sierra Leone, STATWASH Portal; Government of Tanzania, 2014; Government of Uganda, 2012). For additional data see Waterpoint Data Exchange <http://www.waterpointdata.org>

Inadequate finance has major operational implications

Non-functionality rate twice as high when no revenue collected

Rural waterpoint non-functionality rates (n=183,149)¹

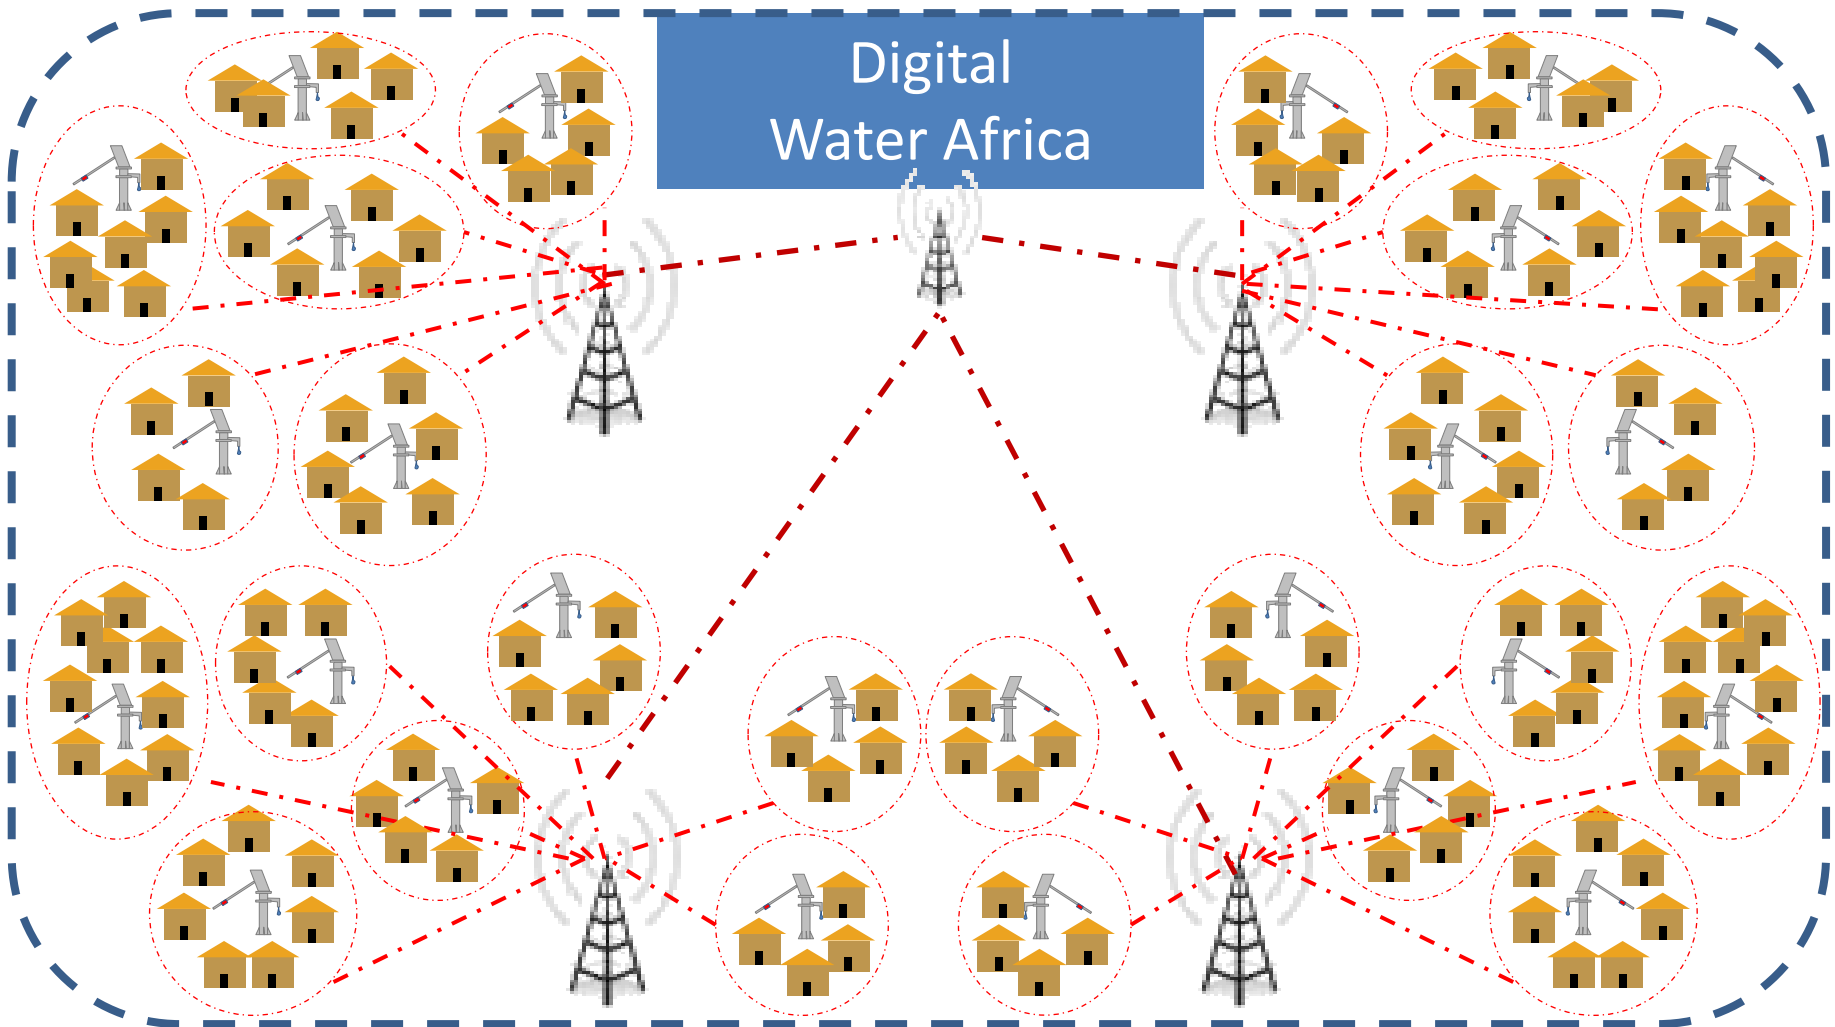

**If SDG is to be achieved in rural Sub-Saharan Africa
then financial sustainability must be addressed**

1. Waterpoints analysed include standpipes, kiosks, handpumps and protected springs. Analysis excludes waterpoints located in urban areas. Data drawn from publicly available waterpoint datasets (Virtual Kenya, 2015; National Water Sanitation and Hygiene Promotion Committee, 2014; Sierra Leone, STATWASH Portal 2014; Government of Tanzania, 2014; Government of Uganda, 2012). For additional data see Waterpoint Data Exchange <http://www.waterpointdata.org/>

Does scale reduce risk?

(operational, financial, institutional)

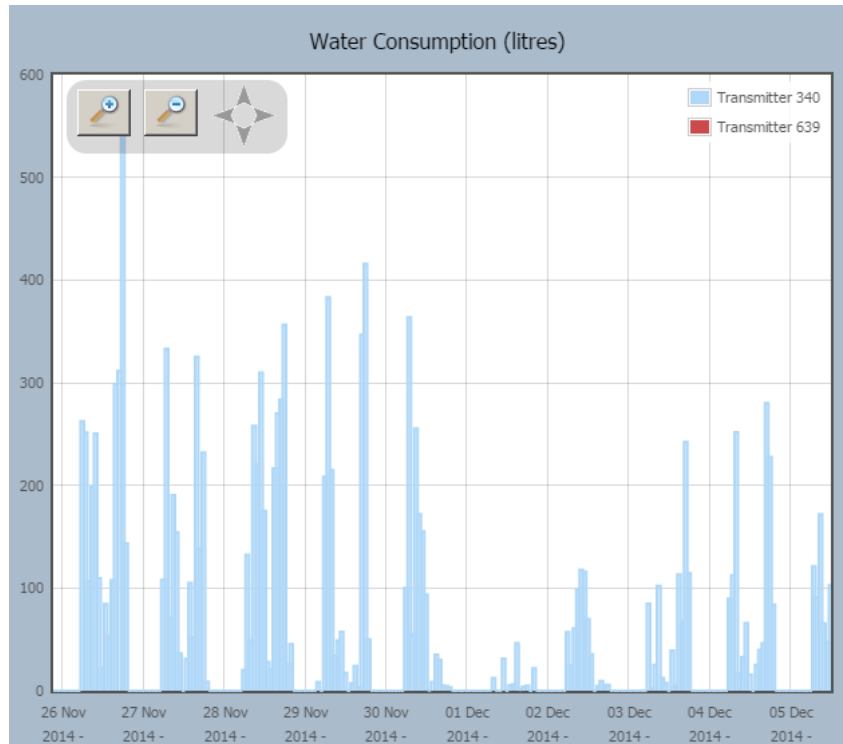

Development of the 'Smart Handpump'

- What is a 'Smart Handpump'?
- How did it come into being?
- What does it tell us?
- What more might it tell us?

Operational Deployment in Kenya

Initial research and development

New insights into rainfall patterns and water use

Kwale, Kenya, Feb-Nov 2014

What on earth do jet engines have to do with handpumps?

Condition monitoring

Predicting failure events for human patients and handpumps

Consumer devices

Clinical devices

Disposable sensors

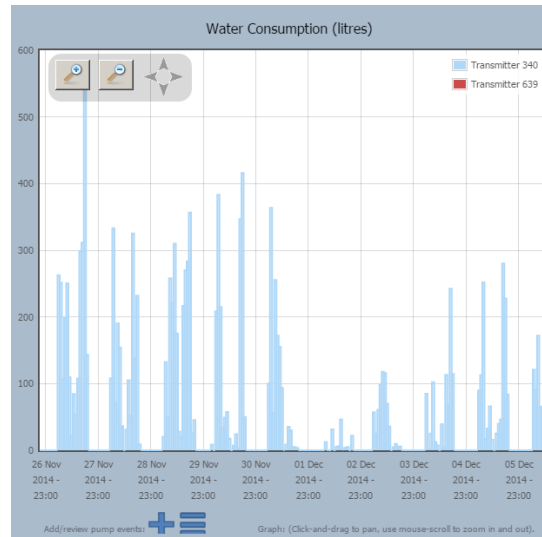

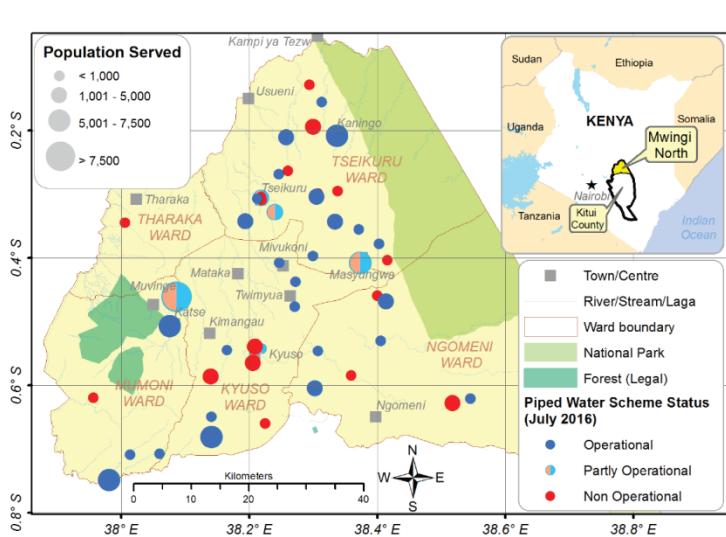

Accidental Infrastructure

Aquifer estimation via accelerometry

Data + Analytics = Better decisions?

FundiFix KWALE

Dhamira: Kutoa huduma endelevu ya utengenezaji wa maji kwa wepesi na unafuu kwa jamii za vijijini

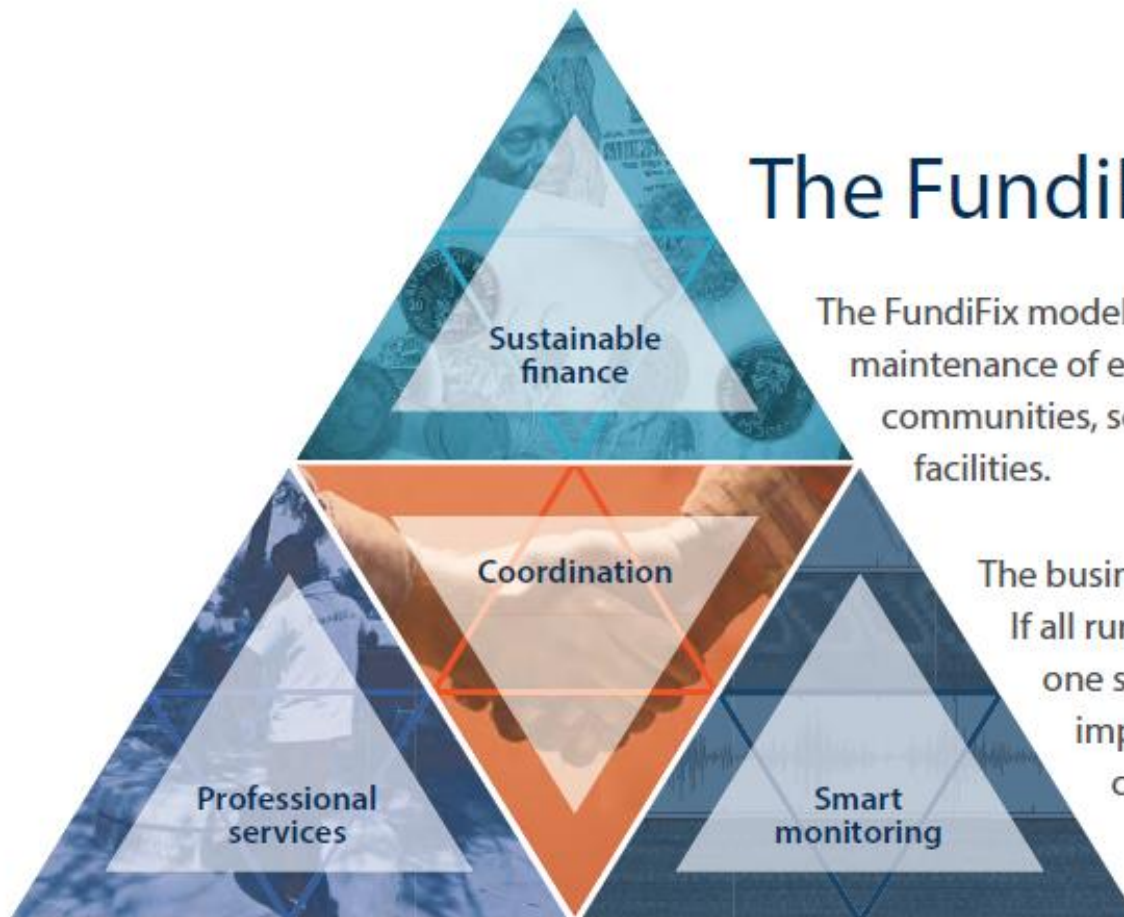

- Huduma ya haraka (isiyozidi siku 3)
- Nambari ya usaidizi inapatikana wakati wowote
- Malipo nafuu ya kila mwezi
- Vifaa bora vinavyotolewa
- Mafundi walio na ujuzi na uzoefu
- Kampuni ya kuaminika na ya kutegemea

Nambari ya Pampu yako:

FUNDI FIX LTD.

FundiFix Ltd. – Local entrepreneurs powered by smart data

The FundiFix model

The FundiFix model focuses exclusively on the maintenance of existing water infrastructure for communities, schools, clinics and other rural facilities.

The business rationale is 'scale reduces risk'. If all rural waterpoints are networked in one system economies of scale can improve service delivery and lower costs. Essentially, it's insurance logic applied to rural water infrastructure.

Fundi noun (E. Africa):

Mechanic (by profession), expert in repair and maintenance of machinery. Word origin – Swahili for craftsman or artisan.

Professional Services

Performance-based management model for every community, school and health clinic

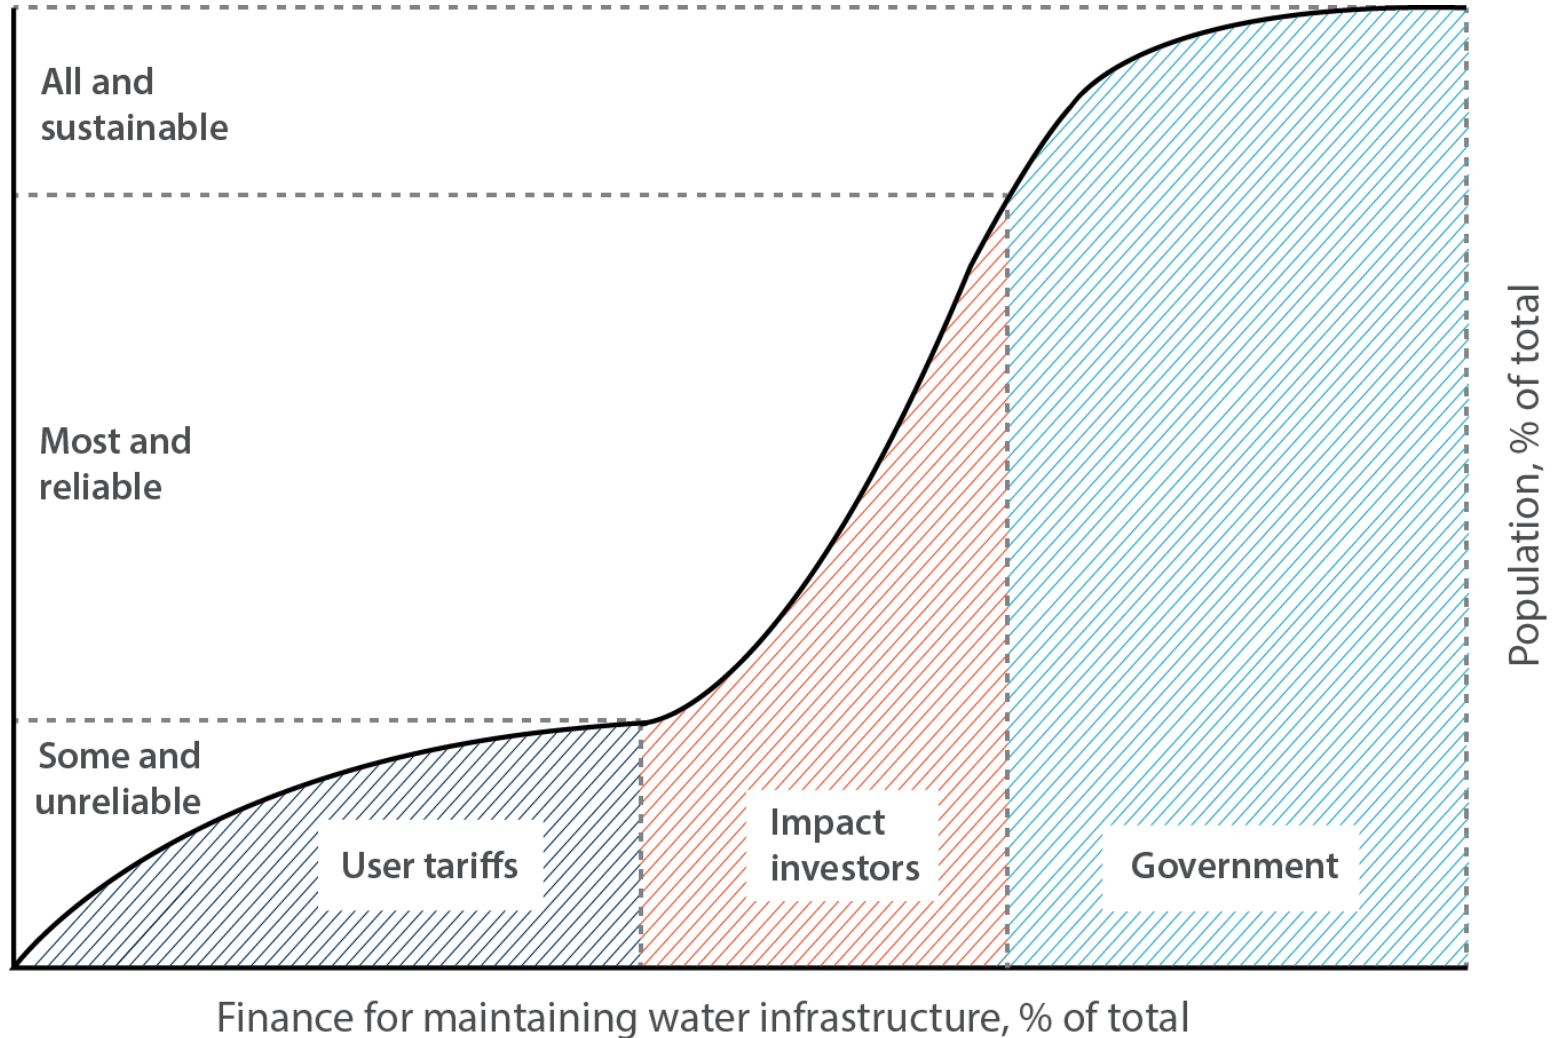

Mobile payments reduce transaction costs and promote accountability

FundiFix Kwale sign-ups and payments 2016

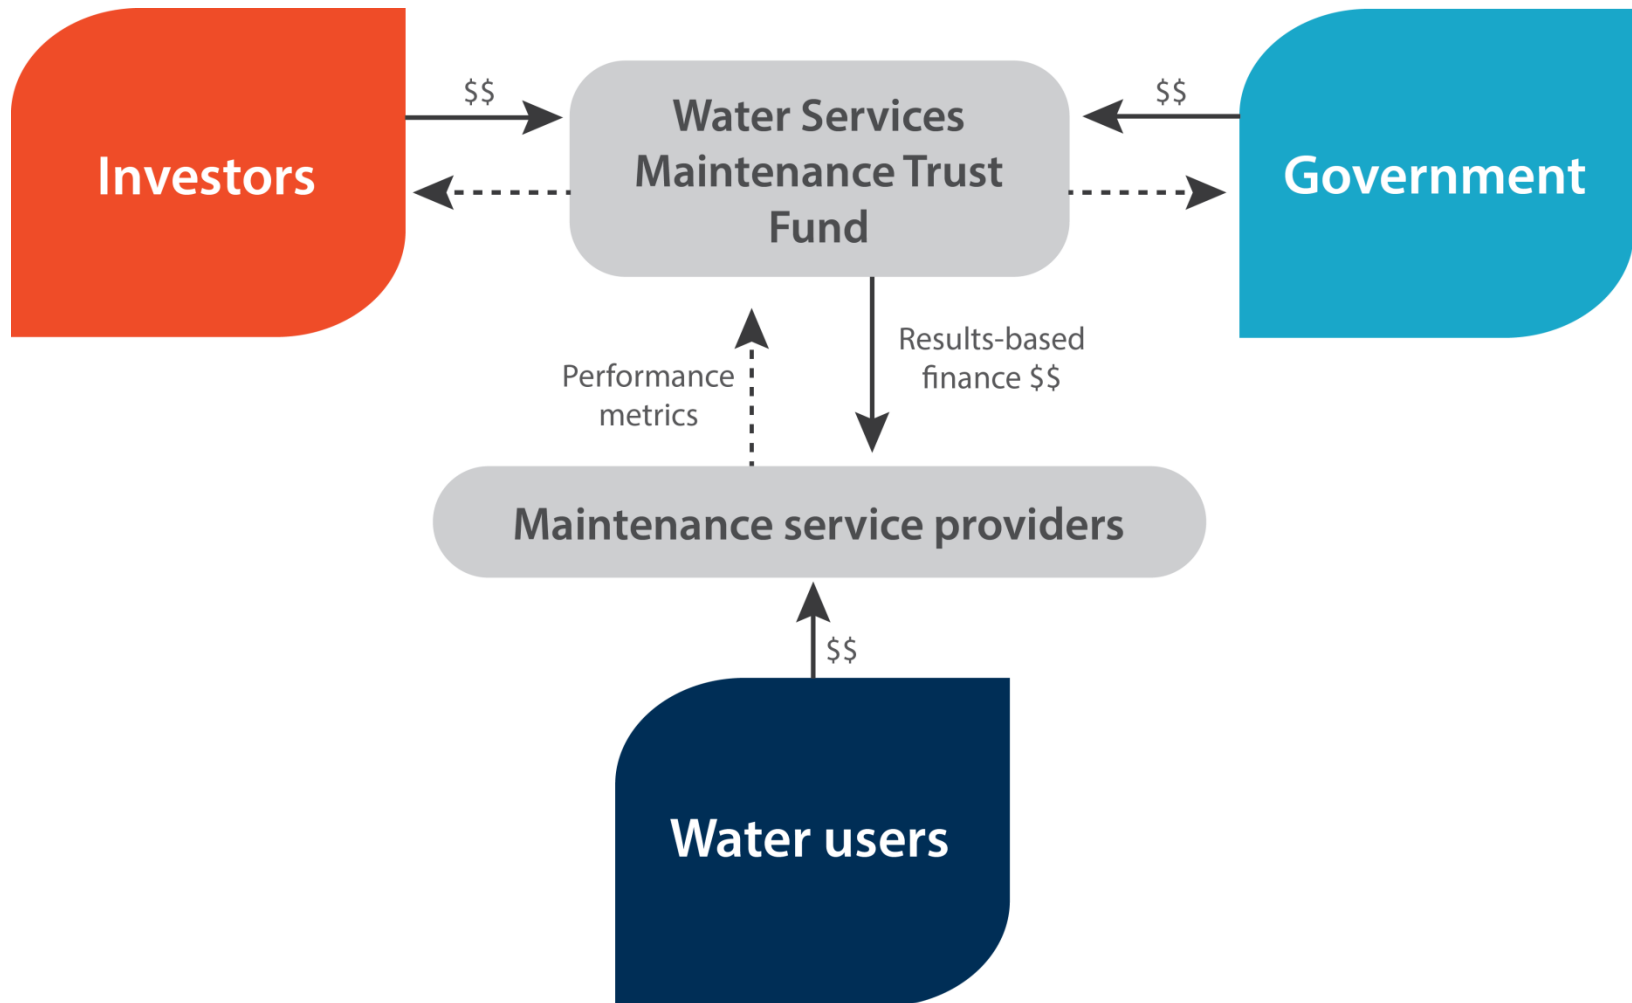

Why a trust fund?

Rewarding performance with local, sustainable finance

How does the fund work?

Pooling financing risk so no one is left behind

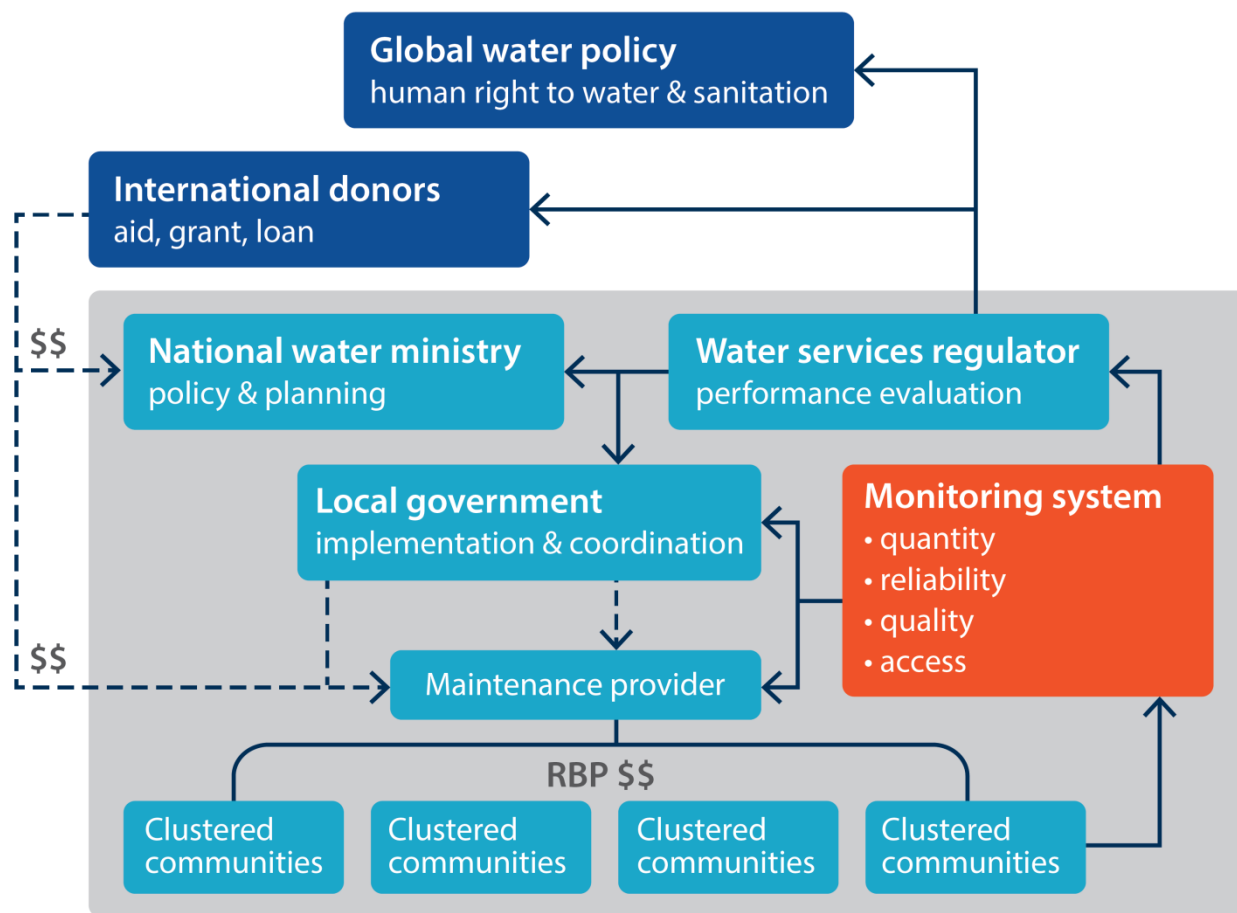

Policy Reform

Decentralisation and water services

Kenya's Constitution of 2010 states in Article 43(1) (d) that **every person has the right to clean and safe water** in adequate quantities.

Water Services Regulation fails the rural poor without monitoring linking investments with outcomes

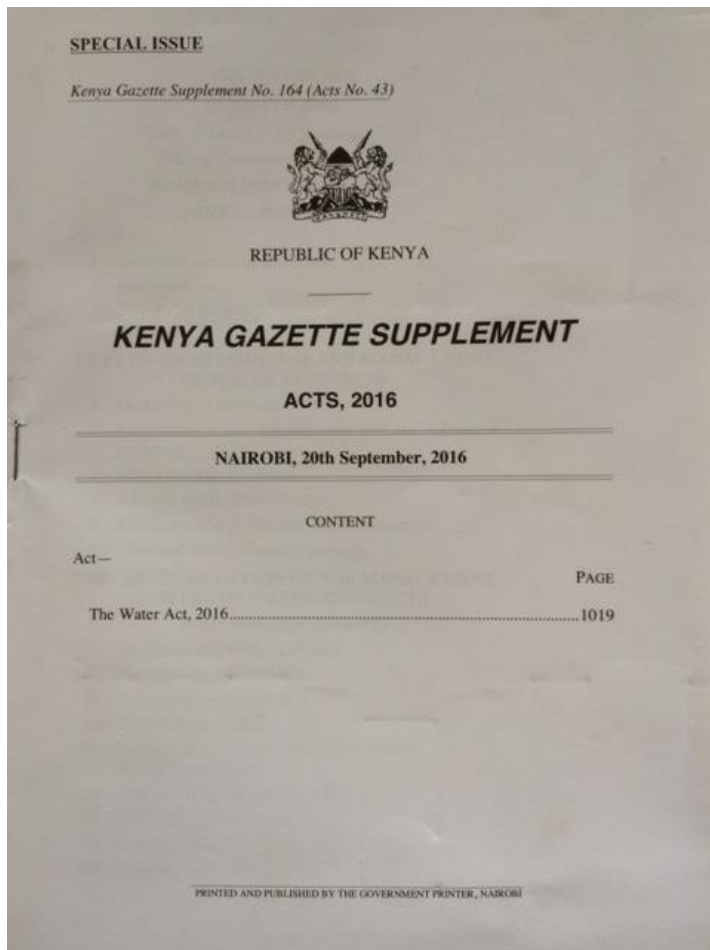

➔ **23% of Kenya's population regulated – in areas considered commercially viable**

Resource flow ----> Information flow —> RBP \$\$ output-based payment

Results-based payment model for rural water services

Kenya takes the lead in Africa

Recognising private sector models with investment and financing plan for rural water services

The Water Act, 2016 – Article 94

- **Nothing** in this **Act** shall **deprive any person or community of water services**
- Responsibility of the 47 **county governments** to put in place measures for **the provision of water services to rural areas**
- Rural water schemes shall meet the **standards set by the Regulatory Board**
- **Management** by community associations, public benefit organizations or **private** sector models under **contract** with the county government
- Institutional Coordination and reporting to the **Regulatory Board and to the Cabinet Secretary**
- **Five year development plan** incorporating an **investment and financing plan** for the provision of water services in rural areas

What next?

- Digital Water Africa
- Sustainable financial models powered by smart information systems
- First Kenyan county with universal drinking water services by 2019?
First African country by 2022?
